

COVID-19 Symptom Survey contingency tables README

I. Overview

This documentation describes the contingency tables produced by grouping COVID-19 Symptom Survey individual responses by various self-reported demographic and other features of respondents.

These contingency tables provide granular breakdowns of survey responses such as vaccine uptake and acceptance. They are more detailed than the coarse aggregates reported in COVIDcast Epidata API and COVID-19 World Survey Open Data API, which are grouped by geographic region and provided on a daily basis. Individual response data for the surveys are available, but only to academic or nonprofit researchers who sign a Data Use Agreement, whereas these contingency tables are available to the general public.

II. Table of contents

4. [Release notes](#)

1. Available data

We currently provide data files at several levels of geographic and temporal aggregation. The reason for this is that **each file is filtered to only include estimates for a particular group if that group includes 100 or more responses**. Providing several levels of granularity allows us to provide coverage for a variety of use cases. For example, users who need the most up-to-date data or are interested in time series analysis should use the weekly files, while those who want to study groups with smaller sample sizes should use the monthly files. Because monthly aggregates include more responses, they have lower missingness when grouping by several features at a time.

The following levels of temporal and geographic aggregation are currently provided:

a. Time periods

- i. Weekly
Beginning on Sundays, a full epiweek (or [MMWR week](#), a standardized numbering of weeks throughout the year).
- ii. Monthly
Full calendar month.

b. Geographies

- i. US
 1. County
 2. State
 3. Country
- ii. Global
 1. Region (typically Admin 1-level)
 2. Country or territory

2. File formats

a. Naming

Each CSV is named as follows:

```
{period_start}_{period_end}_{period_type}_{geo_type}_{aggregation_type}.csv
```

Dates are of the form `yyyyMMdd`. `period_start` refers to the first day of the time period survey responses were aggregated over, in the Pacific time zone (UTC - 7). Unless noted otherwise, the time period is always a complete month (`period_type = 'monthly'`) or epiweek (`period_type = 'weekly'`). `geo_type` is the geographic level responses were aggregated over. `aggregation_type` is a concatenation of other grouping variables used in the aggregation. Values for variables used in file naming align with those within files as specified in the column section below.

b. Columns

Within a CSV, the first few columns are the grouping variables. If a particular grouping variable is not used in the aggregation, it will be missing (null). Each aggregated indicator reports three columns (unrounded):

- i. `val_<indicator name>`: the main value of interest, e.g., percent, average, or count, estimated using the survey weights
- ii. `se_<indicator name>`: the standard error of `val_<indicator name>`
- iii. `n_<indicator name>`: the number of survey responses used to calculate `val_<indicator name>`

Column name	Description	Type
survey_geo	Survey geography (US; global)	string
period_start	First day of time period	date (yyyyMMdd)
period_end	Last day of time period	date (yyyyMMdd)
period_val	Month or week number	integer
period_type	Time period type (weekly; monthly)	string
geo_type	Geography type (US: county; state; nation // Global: region; country)	string
aggregation_type	Additional aggregation type; alphabetized concatenation of grouping variables	string
country	Country name	string
ISO_3	Three-letter ISO country code	string
GID_0	GADM level 0 ID	string
region	Region (global only)	string
GADM_1	GADM level 1 ID	string
state	State name (US only)	string
state_fips	State FIPS code (US only)	string
county	County name (US only)	string
county_fips	County FIPS code (US only)	string
grouping_var1	Grouping variable 1	string, boolean, or float
...	Additional grouping variables	
grouping_varN	Grouping variable N	string, boolean, or float
val_indicator1	Value (e.g., percentage) of indicator 1 estimate	double
se_indicator1	Standard error of indicator 1 estimate	double
sample_size_indicator1	Sample size for indicator 1 estimate	integer
represented_indicator1	Weighted sample size for indicator 1 estimate	double
...	Additional indicators	
issue_date	Date on which estimates were generated	date (yyyyMMdd)

c. Missing values

Grouping variables (including `region`) will contain an empty string to represent respondents who provided one or more responses to survey items used for indicators (e.g., vaccine uptake) but who did not provide a response to the survey item used for the particular grouping variable. For example, the below would be the format for estimates for 18-24 respondents in the following groups: males, females, and respondents who did not provide a response to the gender question.

```
age,gender,val_pct_vaccinated  
18-24, Male, 24.2  
18-24, Female, 27.4  
18-24,, 18.2
```

3. Definitions

a. Demographic & other grouping variables

Grouping variable	Description	Values
age	Age group, condensed (65-74 and 75+ groups combined for more coverage)	18-24 25-44 45-64 65+
age65plus	Age group, 65 plus (combined into two for more coverage)	Under 65 65 or older
agefull	Age group, full (as provided in survey response options)	18-24 25-34 35-44 45-54 55-64 65-74 75+
comorbidcancer	Comorbidity, cancer	TRUE FALSE
comorbiddiabetes	Comorbidity, diabetes	TRUE FALSE
comorbidheartdisease	Comorbidity, heart disease	TRUE FALSE
comorbidimmuno	Comorbidity, immunocompromised	TRUE FALSE
comorbidkidneydisease	Comorbidity, chronic kidney disease	TRUE FALSE
comorbidlungdisease	Comorbidity, chronic lung disease	TRUE FALSE
comorbidobese	Comorbidity, obesity	TRUE FALSE
edulevel	Education, level (US only)	LessThanHighSchool HighSchool SomeCollege FourYearDegree PostGraduate

Grouping variable	Description	Values
eduyears	Education, years of (global only)	0 1-6 7-12 13-15 16-30
eligible	Any vaccine-eligible conditions (cancer, chronic kidney disease, chronic lung disease, diabetes, heart disease, immunocompromised)	TRUE FALSE
eligiblepregsmokeobese	Any vaccine-eligible conditions with smoking, pregnancy, & obesity (cancer, chronic kidney disease, chronic lung disease, diabetes, heart disease, immunocompromised, obesity, pregnancy, smoking)	TRUE FALSE
gender	Gender	Male Female Other
healthcareworker	Healthcare worker	TRUE FALSE
hispanic	Hispanic	TRUE FALSE
industry	Industry (global only)	Agriculture BuyingSelling Construction Education Utilities Financial Health Manufacturing Mining PersonalServices Professional PublicAdministration Tourism Transportation Other

Grouping variable	Description	Values
occupation	Occupation (US only)	SocialService Education Arts ProtectiveService FoodService HealthcarePractitioner HealthcareSupport BuildingMaintenance PersonalCare Sales Office Construction Maintenance Production Transportation Other
pregnant	Pregnant	TRUE FALSE
race	Race (US only)	AmericanIndianAlaskaNative Asian BlackAfricanAmerican NativeHawaiianPacificIslander White MultipleOther
raceethnicity	Race / ethnicity (US only)	NonHispanicAmericanIndianAlaskaNative NonHispanicAsian NonHispanicBlackAfricanAmerican NonHispanicNativeHawaiianPacificIslander NonHispanicWhite NonHispanicMultipleOther Hispanic
smoker	Smoker	TRUE FALSE
urban	Urban	TRUE FALSE

Aggregation thresholds

As [previously mentioned](#), files are filtered to only include estimates for a particular group if that group includes 100 or more responses. Especially in the weekly aggregates, many of the state-level (US) or region-level (global) groups have been filtered out due to low sample size. In such cases, files which group estimates by a single demographic of interest (e.g., age) will likely provide more coverage.

Missing values

In addition to the above listed values, each grouping variable can contain an empty string to represent respondents who did not provide a response to a particular survey item. For example, rows which aggregate respondents who did not answer the age question will contain an empty string in the age column.

b. Indicators

The files contain weighted estimates of the value of interest (e.g., percentage) for respondents who fulfill one or several criteria (as [defined above](#)). Each row contains these estimates, as well as standard error and sample sizes, for the specified time period, geography, and demographic & other grouping variables.

We plan to expand this list of indicators in the future based on research and public health needs.

See table on following page for definitions.

COVID-19 Symptom Survey contingency tables documentation 2021-04-20

Category	Indicator name	Description	Definition		Survey item(s)		Available from	
			US	Global	US	Global	US	Global
Behaviors	wearing_mask_7d	Percentage of people who wore a mask most or all of the time while in public in the past 7 days	# most of the time OR all of the time / # any C14a response	# most of the time OR # all of the time / # any C5 response	C14a	C5	2021-02-08	2021-01-06

4. Release notes

v1.0

Planned updates

- Final standardization across US and global files with respect to format and naming.
- Longer time periods for indicators for survey items that were fielding prior to January.

v0.2

Release date

2021-04-20

Overview

Available for the global survey currently; replaces v0.1. Will be available for the US survey in the near future and replace v0.0. Includes more additional demographic breakouts and new survey indicators. Reformats grouping variable names and values to align format of US and global files.

Changes

- Added education and occupation/industry demographic grouping variables:
 - Education, level (US): `edulevel`
 - Education, years of (global): `eduyears`
 - Industry (global): `industry`
 - Occupation (US): `occupation`
- Added additional pregnancy demographic breakouts:
 - Pregnant x raceethnicity (US): `pregnant_raceethnicity`
 - Pregnant x race x Hispanic (US): `hispanic_pregnant_race`
 - Pregnant x urban (global): `pregnant_urban`

- Added vaccination appointments, vaccination informedness, direct contact and anosmia indicators:
 - Direct contact: `direct_contact`
 - Anosmia: `anosmia`
 - Informedness about access: `informed_access`
 - Have an appointment to get a vaccination: `appointment_have`
 - Tried to get an appointment to get a vaccination: `appointment_tried`
- Removed unused grouping variable columns from individual files (e.g., for an age contingency table, the `gender` column is not included) and alphabetized grouping columns.
- Concatenated grouping variables in alphabetical order to form `aggregation_type`.
- Renamed grouping variables (see below).
- Renamed `ds` to `issue_date`.
- Changed percentage indicator values to range from 0 to 100 (formerly 0 to 1).
- Converted binary grouping variables (e.g., healthcare workers) from string to boolean.
- Formatted string grouping variables with upper camelcase.

Renamed grouping variables

v0.1 grouping variable name	v0.2 grouping variable name
<code>ethnicity</code>	<code>hispanic</code>
<code>raceeth</code>	<code>raceethnicity</code>
<code>urbanicity</code>	<code>urban</code>
<code>hcw</code>	<code>healthcareworker</code>
<code>eligible2</code>	<code>eligiblepregsmokeobese</code>
<code>comorbidhd</code>	<code>comorbidheartdisease</code>
<code>comorbidckd</code>	<code>comorbidkidneydisease</code>
<code>comorbidcld</code>	<code>comorbidlungdisease</code>

v0.1

Release date

2021-04-12

Overview

Available only for the global survey; replaces v0.0. Includes more granular demographic breakouts and additional vaccine-related indicators.

Changes

- Additional combinations of demographic breakouts for: age; gender; urbanicity; healthcare workers.
- Addition of demographic breakouts for vaccine-eligible conditions / comorbidities.
- Updated implementation of `hesitant_concerned_sideeffects` and `hesitant_vaccinated_likely_...` indicators (see details below).
- Renamed indicator variables (see details below).

Updated indicator definitions

To align the US and global datasets, the following indicators were updated in the global data in v0.1:

v0.0 indicator	v0.0 definition	v0.1 indicator	v0.1 definition
hesitant_concerned_sideeffects	# (V9: very concerned OR moderately concerned) AND (V3: no, probably not OR no definitely not) / # (V9 responses)	hesitant_worried_vaccine_sideeffects	# (V9: very concerned OR moderately concerned) AND (V3: no, probably not OR no definitely not)/# (V9 response AND (V3: no, probably not OR no definitely not))
hesitant_vaccinated_likely_fam	# (V4: more likely family & friends) / # (any V4 response)	hesitant_vaccine_likely_friends	# (V4: more likely family & friends) / # (V4 response AND (V3: no, probably not OR no definitely not))
hesitant_vaccinated_likely_healthcare	# (V4: more likely healthcare workers) / (# any V4 response)	hesitant_vaccine_likely_local_health	# (V4: more likely healthcare workers) / (# V4 response AND (V3: no, probably not OR no definitely not))
hesitant_vaccinated_likely_who	# (V4: more likely who) / # (any V4 response)	hesitant_vaccine_likely_who	# (V4: more likely who) / # (V4 response AND (V3: no, probably not OR no definitely not))
hesitant_vaccinated_likely_govt	# (V4: more likely government) / # (any V4 response)	hesitant_vaccine_likely_govt	# (V4: more likely government) / # (V4 response AND (V3: no, probably not OR no definitely not))
hesitant_vaccinated_likely_politicians	# (V4: more likely politicians) / # (any V4 response)	hesitant_vaccine_likely_politicians	# (V4: more likely politicians) / # (V4 response AND (V3: no, probably not OR no definitely not))
hesitant_vaccinated_likely_doctors	# (V4: more likely doctors) / # (any V4 response)	hesitant_vaccine_likely_doctors	# (V4: more likely doctors) / # (V4 response AND (V3: no, probably not OR no definitely not))

The global estimates for the v0.0 indicators represent the percentage of respondents who are both vaccine hesitant and more likely to be vaccinated if given a recommendation among ALL respondents to those survey items. These estimates have been updated to reflect the percentage of respondents who are more likely to be vaccinated among ONLY among those who are hesitant, which will align with the US implementation.

Renamed indicators

v0.0 indicator name	v0.1 indicator name
accepting	accept_vaccine
hesitant	hesitant_vaccine
accepting_yes_definitely	accept_vaccine_defyes
accepting_yes_probably	accept_vaccine_probyes
accepting_no_probably	accept_vaccine_probno
accepting_no_definitely	accept_vaccine_defno
vaccinated_likely_friends	vaccine_likely_friends
vaccinated_likely_hcw	vaccine_likely_local_health
vaccinated_likely_who	vaccine_likely_who
vaccinated_likely_govt	vaccine_likely_govt_health
vaccinated_likely_politicians	vaccine_likely_politicians
vaccinated_likely_doctors	vaccine_likely_doctors
concerned_sideeffects	worried_vaccine_sideeffects
hesitant_concerned_sideeffects	hesitant_worried_vaccine_sideeffects
hesitant_vaccinated_likely_fam	hesitant_vaccine_likely_friends
hesitant_vaccinated_likely_healthcare	hesitant_vaccine_likely_local_health
hesitant_vaccinated_likely_who	hesitant_vaccine_likely_who
hesitant_vaccinated_likely_govt	hesitant_vaccine_likely_govt
hesitant_vaccinated_likely_politicians	hesitant_vaccine_likely_politicians
hesitant_barrier_dontlike	hesitant_barrier_dislike_vaccines
hesitant_barrier_notrec	hesitant_barrier_not_recommended
hesitant_barrier_wait	hesitant_barrier_wait_safety
hesitant_barrier_otherpeople	hesitant_barrier_low_priority
hesitant_barrier_trustvax	hesitant_barrier_distrust_vaccines
hesitant_barrier_religion	hesitant_barrier_religious
hesitant_barrier_health	hesitant_barrier_health_condition
hesitant_barrier_dontneed_alreadyhad	hesitant_dontneed_reason_had_covid
hesitant_barrier_dontneed_dontspendtime	hesitant_dontneed_reason_dont_spend_time
hesitant_barrier_dontneed_nothighrisk	hesitant_dontneed_reason_not_high_risk

hesitant_barrier_dontneed_precautions	hesitant_dontneed_reason_precautions
hesitant_barrier_dontneed_notserious	hesitant_dontneed_reason_not_serious
hesitant_barrier_dontneed_notbeneficial	hesitant_dontneed_reason_not_beneficial
hesitant_barrier_dontneed_other	hesitant_dontneed_reason_other

v0.0

Release date

2021-03-25

Overview

Initial release of contingency tables for the US and global surveys, focused on basic demographic breakouts and vaccine-related indicators.

Global data

- Files available [here](#).
- Demographic breakouts include various combinations of: age; gender; urbanicity; healthcare workers.
- Indicator variables include a variety of uptake and acceptance measures; hesitancy reasons; likelihood of getting a vaccine based on recommendations from various sources; concern about side effects.

US data

- Documentation and files available [here](#).
- Demographic breakouts include various combinations of: age; gender; race; ethnicity; vaccine-eligible conditions / comorbidities; healthcare workers.
- Indicator variables include a variety of uptake and acceptance measures; hesitancy reasons; likelihood of getting a vaccine based on recommendations from various sources; concern about side effects; CLI; ILI.
